

Serial No.: 10/619,988

1 IN THE SPECIFICATION

2 Replace the abstract on page 44 with the following paragraph:

3 Apparatus, methods and systems ~~are described~~ for controlling data flow of data between first and  
4 ~~second data processing systems via a memory~~. In an example embodiment, the apparatus  
5 includes comprises descriptor logic for generating a plurality of descriptors including a frame  
6 descriptor defining a data packet to be communicated between a location in the memory and ~~the~~  
7 ~~second a~~ data processing system, and a pointer descriptor identifying the location in the memory.  
8 The apparatus also includes comprises a descriptor table for storing ~~the~~ descriptors generated by  
9 the descriptor logic for access by the ~~first and second data processing systems system~~.
